MATH MAGIC

Smart Tricks for Faster Calculations

Most calculations do not need more steps.
They need a better approach.

Here’s a small taste of what you’ll find inside.

---

01 — SQUARES

Numbers Ending in 5

When a number ends in **5**, you can square it without doing long multiplication.

Example: 35^2

Take the number before 5:

3

Multiply it by the next number:

3 × 4 = 12

Now attach **25**:

35^2 = 1225

Try It

85^2

8 × 9 = 72

So:

85^2 = 7225

A simple pattern can turn a calculation that looks slow into a few seconds of mental math.

---

02 — MATH MAGIC

Can You Predict the Final Total?

Here's a demonstration from the full guide.

Imagine someone writes:

47,382

Then another number is added.

After a few more numbers are written, you confidently write down your prediction **before the final addition is completed**.

The final answer turns out to be:

212,343

And yes...

You knew it before they finished.

How did that happen?

There is a simple number pattern hiding inside the calculation.

The trick isn't about guessing.

It's about controlling the numbers in a way that makes the final total predictable.

The full guide shows you exactly how to set it up and perform it.

---

03 — BEFORE vs AFTER

Same Calculation & Better Approach.

Before

998 + 347

A normal approach might look like this:

998 + 347 = 1345

Nothing wrong with it.

But there's a faster way to think about it.

After

Notice that **998 is very close to 1000**.

So think:

1000 + 347 = 1347

Then correct the extra 2:

1347 − 2 = 1345

So:

998 + 347 = 1345

The answer didn't change.

The approach did.

One More

Before

25 × 48

After

Instead of multiplying directly:

25 × 48

Think:

50 × 24

Then:

50 × 24 = 1200

So:

25 × 48 = 1200

Sometimes the trick isn't doing the calculation faster.

It's **changing the calculation into an easier one**.

WHAT'S INSIDE THE FULL GUIDE?

The sample only shows you a few ideas.

The complete guide covers:

Squares & Square Roots
Cubes & Cube Roots
Table Tricks
Percentage & Fraction Tricks
Profit, Loss & Interest
Divisibility Tricks
